Employee Workload – Functional Workflow

Project: TaskFlow – Intelligent Task Allocation & Tracking System
Parent Module: Monitoring · **Child Module:** 04.4 Employee Workload
Version: 1.0 · **Last Updated:** 31-Oct-2026
Author: Jojo George (jojogeorge3344@gmail.com)

1. Overview

Employee Workload shows how open work is spread across employees: each person's active, high-priority, overdue and completed task counts, their project allocations, and a "High load" badge for people carrying much more than average. Managers use it to balance work and jump to a person's tasks.

2. Purpose / Business Value

- Lets managers spot overloaded and under-used employees before deadlines slip.
- Shows project allocation percentages next to task counts, so planning uses both.
- Gives a one-click path from a busy person to their task list, where tasks can be reassigned.

3. Who Can Access

Role	Can See	Can Use	Access Level (Own / Team / Organization)
Administrator	✅	✅	Organization
Manager	✅	✅	Organization (the list is not narrowed to the Manager's team; the **Tasks →** link then applies the normal team scope)
Employee	❌	❌	–
Custom Role	Configurable	Configurable	As granted through `workload.view` (Organization)

The menu item is **TaskFlow Monitoring → Employee Workload**, shown only with `workload.view`.

4. Screens

#	Screen Name	Menu Path	Purpose	Visible To
1	Employee Workload	TaskFlow Monitoring → Employee Workload (`/workload`)	See each employee's task counts and allocation	`workload.view` (Administrator, Manager)

5. Screen & Functionality Details

5.1 Screen: Employee Workload

Purpose: Show how open work is spread across employees so managers can balance it. **Who can see this screen:** Administrator and Manager by default. **Required permission:** `workload.view`

Screen Elements

- Header: "N employees · average X active tasks".
- Filters (need `workload.filters.use`): **Project** (reloads from the server) and **Employee** (filters on screen), and **Reset**.
- Table: Employee (with a "High load" badge), Projects (name and %), Allocated %, Active, High priority, Overdue (highlighted when more than 0), Completed, a workload bar, and a **Tasks →** link (needs `workload.tasks.open`).
- Legend: "Highlighted rows carry at least twice the average active load (X active tasks)."

5.2 Functionalities

#	Functionality	Purpose	Who Can See	Who Can Use	Permission Required	Scope
1	View workload	See each employee's task counts and allocation	Administrator, Manager	Administrator, Manager	`workload.view`	Org
2	Filter by project / employee	Focus on one project or one person	Administrator, Manager	Administrator, Manager	`workload.filters.use`	Org
3	Open an employee's tasks	Jump to the task list filtered to that employee	Administrator, Manager	Administrator, Manager	`workload.tasks.open`	Own / Team / Org (task list scope still applies)
4	Spot high load	Highlight people with at least twice the average active tasks	Administrator, Manager	Administrator, Manager	`workload.view`	Org

5.3 Step-by-Step Workflow – Review Workload

1. User opens **TaskFlow Monitoring → Employee Workload**.
2. System lists every active user whose role does not hold `tasks.view.all` (the Employee role by default), with their counts.
3. User optionally picks a **Project** (the list reloads) or an **Employee**.
4. User reviews the "High load" rows and clicks **Tasks →** to open that person's task list.

Flow Diagram

5.4 Business Rules & Validations

- **Active** = tasks that are not completed, cancelled or deleted. **High priority** = active tasks with High or Critical priority. **Overdue** = active tasks past their deadline. **Completed** = completed tasks.
- Employees with no tasks are listed with zero counts.
- The Project filter shows only people allocated to that project. Allocated % is the sum of the person's project allocations.
- "High load" means the person's active count is at least twice the average of the rows shown (worked out on screen).
- The list covers the whole organization. It is not narrowed to a Manager's team.

5.5 Messages Shown to the User

Situation	Message
Load failed	Could not load the workload. Check your connection and try again.
No rows	No employees to show – There are no active employees in this project.
Legend	Highlighted rows carry at least twice the average active load (X active tasks).
No permission	Without `workload.view` the menu item is hidden and the route sends the user to the dashboard. The API returns 403.

---

6. Permission Summary

Permission Key	Description	Administrator	Manager	Employee	Custom Role
`workload.view`	View workload	Granted	Granted	Denied	Configurable
`workload.filters.use`	Use workload filters (requires `workload.view`)	Granted	Granted	Denied	Configurable
`workload.tasks.open`	Open an employee's tasks from workload (requires `workload.view`)	Granted	Granted	Denied	Configurable

7. Related Modules

- **04.1 Task Management** – The **Tasks →** link opens the Task List filtered to that employee, where tasks can be reassigned.
- **Management** – Project allocations (project, position, percentage) and the employee list come from Management.
- **Reports** – Reports use the same task data. Managers move between Workload and Reports for planning.
- **Settings** – Role Configuration grants the workload keys; which roles hold `tasks.view.all` decides who is listed.

8. Expected Outcome

Managers and Administrators can see workload imbalances and overdue work across employees and open a person's tasks to move work and balance it.
