1. Module Overview

The Profile module ("My Profile") is where every signed-in user looks after their own account. Users can see their account details, update their name, email address and mobile number, and change their password. A password change is confirmed with a code from an authenticator app. The module only ever works on the signed-in user's own account. Nobody can open or change another person's profile here.

2. Purpose / Business Value

- Users can keep their own contact details up to date without asking an administrator (BRD Screen 19, "Expected Result").
- Users can change their password safely. The change needs a code from the authenticator app, and the user is then signed out on every device.
- Role, project, username, employee code and account status are shown but cannot be edited, so nobody can give themselves more access.
- Fewer routine requests reach administrators, and every user sees the same accurate account information.

3. Who Can Access This Module

Role	Can See Module	Can Use Module	Access Level (Own / Team / Organization)
Administrator	✅	✅	Own
Manager	✅	✅	Own
Employee	✅	✅	Own
Custom Role	✅ (Always On)	✅ (Always On)	Own

All four profile permissions are **Always On** for every role, including custom roles. They cannot be removed in Role Configuration. Even an Administrator can only see and change their own profile here. Other users' accounts are managed in **Employee Management**.

4. Screens in This Module

#	Screen Name	Menu Path	Purpose	Visible To
1	My Profile	Side menu → **My Profile** (or the name/avatar link in the top bar)	View your account details and edit your personal information	All signed-in users
2	Change Password	My Profile → **Password** card → **Change password**	Set a new password, confirmed with an authenticator code	All signed-in users
3	Security Setup (Auth module)	Opened automatically after the first sign-in, before MFA is set up	Set up the authenticator app and get backup codes. The server side of this lives in the Profile module.	All signed-in users who have not set up two-step verification

5. Child Modules

#	Child Module	Purpose	Visible To	Document
07.1	User Profile	View your own account details and edit your full name, email address and mobile number	All signed-in users	`07.1-User-Profile.md`
07.2	Change Password	Set a new password, confirmed with an authenticator or backup code; signs you out everywhere	All signed-in users	`07.2-Change-Password.md`
07.3	Two-Step Verification (self-service)	Set up the authenticator app, receive backup codes, check codes and regenerate backup codes	All signed-in users	`07.3-Two-Step-Verification.md`

The child documents are in the `07-Profile/` folder next to this file.

6. Permission Summary (Module Level)

Permission Key	Description	Administrator	Manager	Employee	Custom Role	Child Module
`profile.view`	View my profile – open the user's own profile	Always On	Always On	Always On	Always On	07.1 User Profile
`profile.edit`	Edit my personal information – update the user's own contact details	Always On	Always On	Always On	Always On	07.1 User Profile
`profile.password.change`	Change my password – change the user's own password	Always On	Always On	Always On	Always On	07.2 Change Password
`profile.mfa.manage`	Manage my authenticator – set up two-step verification and regenerate backup codes	Always On	Always On	Always On	Always On	07.3 Two-Step Verification

These keys are given to every user automatically. They are not stored per role and cannot be assigned or removed in Role Configuration.

7. Related Modules

- **Authentication** – After a password change the user signs in again. The Security Setup screen uses the Profile two-step verification actions. Account Recovery is the route for a forgotten password.
- **Management (Employee Management)** – Administrators manage the read-only fields shown on My Profile: role, projects, departments, username, employee code and status. Email uniqueness rules are shared.
- **Settings (Role Configuration)** – Lists the four profile permissions as Always On. They cannot be switched off.
- **TaskFlow Assistant (TFA)** – Can prepare a name or email change for the user to confirm, explains how to change a password, and links to My Profile.
- **Dashboard / shell** – The top-bar name updates as soon as the profile is saved. The **My Profile** menu item is always shown.

8. Expected Outcome

Every user, whatever their role, can open My Profile and see accurate details about their account. They can fix their own name, email and mobile number without asking an administrator. They can change their password safely: the change is confirmed with an authenticator code and signs them out everywhere. They cannot change their own role, projects or account status.
