Legal Footer and Ownership Notice – Technical Documentation

> **Project:** TaskFlow – Intelligent Task Allocation & Tracking System **Parent Module:** Legal · **Child Module:** 10.2 Legal Footer and Ownership Notice **Version:** 1.0 · **Last Updated:** 31-Oct-2026 **Backend:** ASP.NET Core Web API (.NET 10) · **Frontend:** Angular · **Database:** SQLite (EF Core) **Author:** Jojo George (jojogeorge3344@gmail.com) © 2026 Jojo George. All rights reserved.

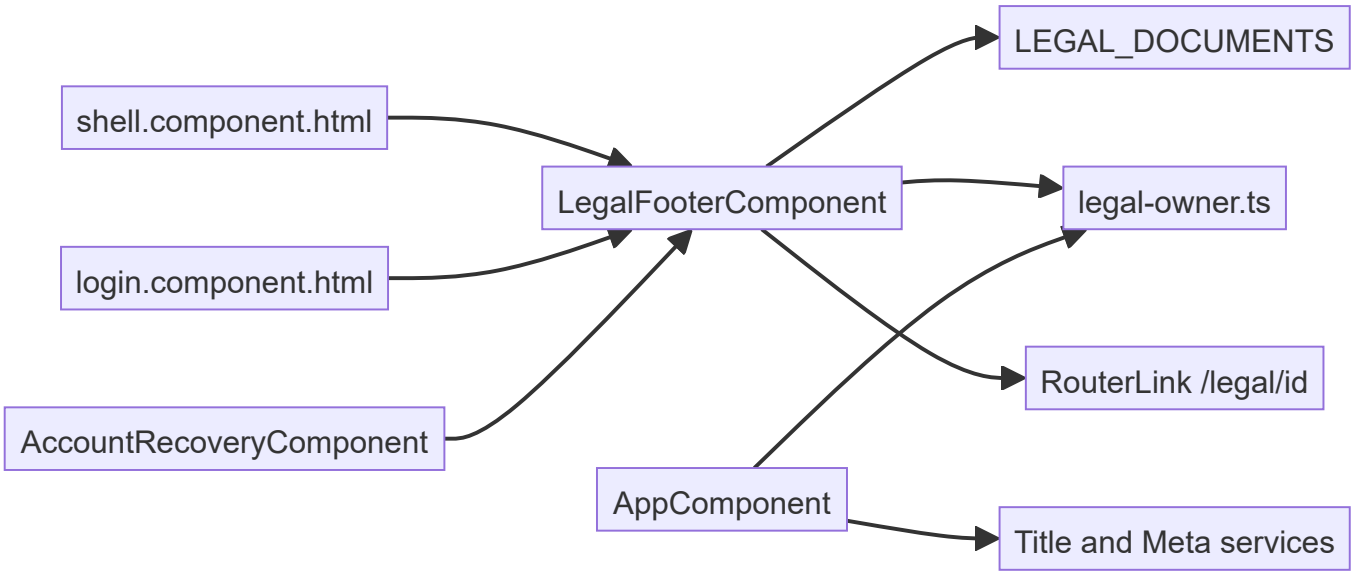

1. Technical Overview

This child is frontend-only. It has two parts:

- The shared standalone `LegalFooterComponent` (`app-legal-footer`, variants `surface` / `dark`). The application shell, the login page and the account recovery page embed it. It builds its five links from `LEGAL_DOCUMENTS` and its ownership line from `legal-owner.ts`.
- `AppComponent.ngOnInit`, which sets the document `<title>` and the `author` / `description` / `copyright` meta tags from the same owner record.

There is no HTTP call, controller, service, repository or table.

2. Architecture Flow

3. Backend File Structure

Layer	Path	Files
Controller / Service / Repository / DTOs / Validators / Entities / Enums / Authorization	*Not applicable for this module.*	–

4. Frontend File Structure

Type	Path	Purpose
Shared component	`src/app/shared/components/legal-footer/legal-footer.component.ts` / `.html` / `legal-footer.model.ts`	`LegalFooterComponent`, `LegalFooterVariant = 'surface' | 'dark'`
Data / utils (shared with 10.1)	`src/app/modules/legal/utils/legal-owner.ts`	`LEGAL_APPLICATION`, `legalOwnershipLine()`
Data / utils (from 10.1)	`src/app/modules/legal/utils/legal-documents.ts`	`LEGAL_DOCUMENTS`, read to build the links
Consumers	`src/app/layouts/shell.component.html` (`<app-legal-footer variant="surface" />`), `src/app/modules/auth/login/pages/login.component.html` (`variant="dark"`), `src/app/modules/auth/account-recovery/pages/account-recovery.component.ts` (inline template, `variant="dark"`)	Embed the footer
Metadata	`src/app/app.component.ts`	`Title.setTitle` + `Meta.updateTag` (author, description, copyright)
Route / Guard	*None*	The footer has no route of its own and no permission check

5. API & Logic

5.1 API Endpoints

Not applicable for this module. The footer links target the client routes of 10.1 (`/legal/copyright`, `/legal/terms`, `/legal/privacy`, `/legal/disclaimer`, `/legal/licenses`).

5.2 Request / Response Samples

Not applicable for this module.

5.3 Service Layer Logic

Not applicable for this module. (No backend service.) The frontend logic is:

- `LegalFooterComponent` (`selector: 'app-legal-footer'`):
  - `variant = input<LegalFooterVariant>('surface')`. The `dark` variant adds class `legal-footer--dark`.

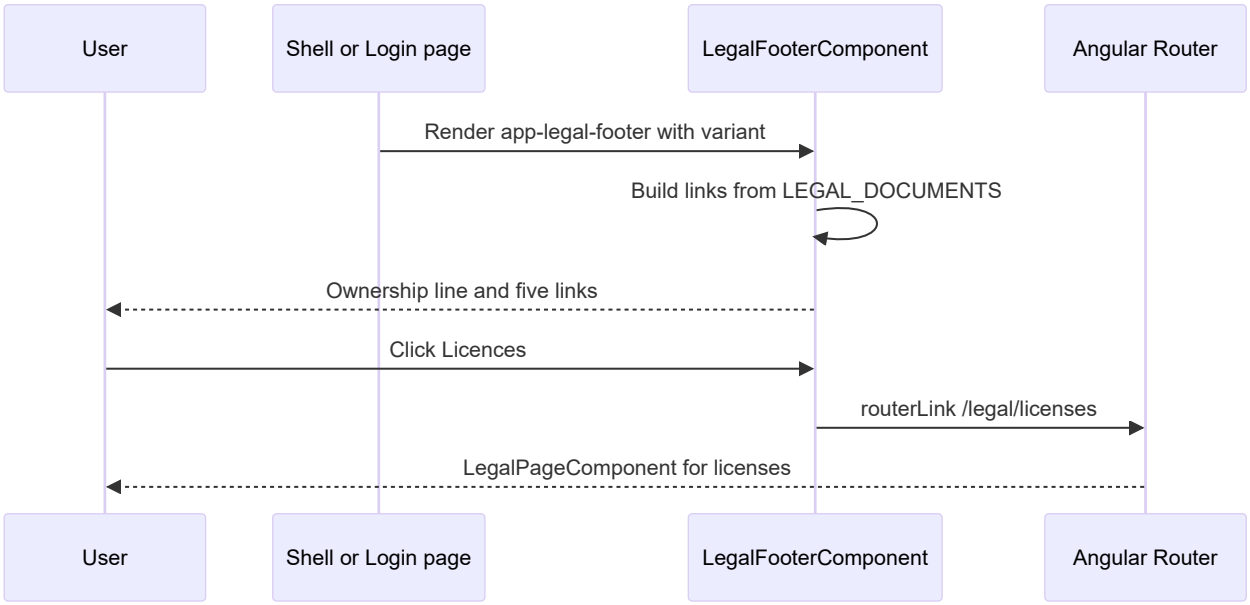

- `links = LEGAL_DOCUMENTS.map(doc => ({ id, path: '/legal/' + doc.id, label: doc.navLabel }))`, so the links always match the registry order.
- `currentDocumentId` is `computed`. It walks `ActivatedRoute.firstChild` to the deepest route and reads `snapshot.data['documentId']`. `isActive(id)` sets `aria-current="page"` on the matching link.
- Template: `<footer>` → ownership line "`{{ ownershipLine }} · {{ applicationName }} — {{ applicationTitle }}.`" → `<nav aria-label="Legal documents">` list of `routerLink`s.

- `AppComponent.ngOnInit`:
  - `title.setTitle('TaskFlow — Intelligent Task Allocation & Tracking System')`
  - `meta.updateTag({ name: 'author', content: 'Jojo George' })`
  - `meta.updateTag({ name: 'description', content: LEGAL_APPLICATION.description })`
  - `meta.updateTag({ name: 'copyright', content: legalOwnershipLine() })`

5.4 Repository Layer

Not applicable for this module.

5.5 Sequence Diagram

---

6. Database Design

Not applicable for this module. (No tables, entities or migrations. The footer reads only the in-memory `legal-owner.ts` and `legal-documents.ts` constants.)

Relationships

- *Not applicable for this module.*

7. Security & Authorization

- **Authentication:** Not required. The footer is shown on the public Sign in and Account Recovery screens as well as inside the signed-in shell.
- **Authorization:** No permission key and no permission directive on the footer.

- **Output safety:** The ownership line is rendered with Angular interpolation (`{{ }}`), so it is HTML-escaped.

Permission Key	Endpoint(s)	UI Element Controlled
(none)	–	`app-legal-footer` ownership line and five links, and the browser title / meta tags, are always shown (Always On for every role, and also for visitors who are not signed in)

8. Validations & Error Handling

Not applicable for this module. The footer has no input. Its links are built from `LEGAL_DOCUMENTS`, so each link matches a registry entry and a route in `legal.routes.ts`.

9. Integrations / Side Effects

- **Notifications / Email / Activity Log:** *Not applicable for this module.*
- **Document head:** `AppComponent` sets the browser title and the `author`, `description` and `copyright` meta tags.

10. Configuration

Not applicable for this module. The ownership values are compile-time constants in `legal-owner.ts` (see the parent document, section 10).

11. Testing

Test Type	File / Location	Covers
Frontend unit	`src/app/modules/legal/utils/legal-documents.spec.ts`	Owner, year and email come from `LEGAL_OWNER` and every document resolves to the same owner values as the footer
Backend	*None*	Legal has no backend code, so there are no backend tests.

> `LegalFooterComponent` and the `AppComponent` title and meta tags have no spec.

12. Known Limitations / Gaps found

- **Footer `aria-current` is never set in practice:** `LegalFooterComponent` highlights the current document, but the footer is never rendered on the legal pages (they are outside the shell and do not include `app-legal-footer`). Also, `currentDocumentId` reads a route snapshot inside `computed` with no signal dependency, so it would not update on navigation.
