TaskFlow Assistant (TFA) Module – Functional Workflow

Project: TaskFlow – Intelligent Task Allocation & Tracking System
Module: TaskFlow Assistant (TFA) · **Child Modules:** Chat, Actions and Tools, Help Knowledge, Audit Log and Rate Limits, Voice Input
Version: 1.0 · **Last Updated:** 31-Oct-2026
Author: Jojo George (jojogeorge3344@gmail.com)

1. Module Overview

TFA (TaskFlow Assistant) is the AI assistant built into TaskFlow. It opens as a small panel on the right of every signed-in screen. Users can ask how TaskFlow works, see their upcoming, due-today and overdue tasks, ask what to work on first, and have TFA prepare a mail, a change to their own profile or (for administrators) a change to another user's role. TFA never acts on its own: every prepared action is shown on a card and only happens when the user clicks Confirm.

2. Purpose / Business Value

- Gives every user a single place to ask "how do I...?" questions, answered only from TaskFlow's own written help, so users do not need training material or a colleague.
- Turns the task list into a clear, repeatable work order (overdue first, then due today, then nearest deadline and highest priority).
- Saves time on routine work such as writing a mail to "my manager" about a task.
- Keeps the organization safe: TFA can only do what the signed-in user could already do in the application, it refuses passwords and API keys in chat, every action needs the user's confirmation, and every action outcome is recorded in an audit log.
- Lets the organization choose where the AI runs: a local model (Ollama, nothing leaves the machine) or a cloud model (Google Gemini, OpenAI GPT), chosen by an administrator in TFA Settings.

3. Who Can Access This Module

Role	Can See Module	Can Use Module	Access Level (Own / Team / Organization)
Administrator	✅	✅	Own conversation and own actions; task answers follow the user's own task access
Manager	✅	✅	Own conversation and own actions; task answers follow the user's own task access

Role	Can See Module	Can Use Module	Access Level (Own / Team / Organization)
Employee	✅	✅	Own conversation and own actions; task answers follow the user's own task access
Custom Role	Configurable	Configurable	As granted (`assistant.chat` , `assistant.actions.confirm`)

Notes:

- The TFA button and panel appear only for users who hold `assistant.chat`.
- A user always works with their **own** conversation and their **own** prepared actions. Another user's conversation or action is reported as "not found".
- When TFA lists tasks it uses the same task rules as the Task Management screens, so it never shows a task the user could not open themselves.

4. Screens in This Module

#	Screen Name	Menu Path	Purpose	Visible To
1	TFA Panel (chat)	Floating **TFA** button at the bottom right of every signed-in screen (no menu item), or say "Hey TF assistant"	Chat with TFA, choose the AI model, start a new chat	Users holding `assistant.chat` (Administrator, Manager, Employee by default)
2	Action Card (inside the panel)	Appears in the TFA Panel when TFA prepares something	Review, edit (mail only), confirm or cancel a prepared action	Users holding `assistant.chat` ; buttons work only with `assistant.actions.confirm`

> TFA has no BRD screen document. Its AI provider setup is a separate screen, **Settings → TFA Settings**, documented in the Settings module (08-Settings.md).

5. Child Modules

#	Child Module	Purpose	Visible To	Document
09.1	Chat	Ask TFA questions in the TFA Panel, see task lists and a ranked work order, choose the AI model, start a new chat	Holders of `assistant.chat`	`09.1-Chat.md`
09.2	Actions and Tools	Prepared actions (mail draft, own profile update, role change) on an Action Card that the user confirms, edits or cancels; lookup and guidance tools	Holders of `assistant.chat` ; buttons work with `assistant.actions.confirm` (role change also `roles.manage`)	`09.2-Actions-and-Tools.md`
09.3	Help Knowledge	"How do I...?" answers from the 19 built-in help topics, role-aware	Holders of `assistant.chat`	`09.3-Help-Knowledge.md`

#	Child Module	Purpose	Visible To	Document
09.4	Audit Log and Rate Limits	Background safeguards: action outcome audit log and 20-messages-per-minute limit	No screen (users only see the "too quickly" message)	`09.4-Audit-Log-and-Rate-Limits.md`
09.5	Voice Input	Hands-free wake phrase "Hey TF assistant", dictation and answers read aloud	Holders of `assistant.chat`, in Chrome or Edge	`09.5-Voice-Input.md`

Child documents are in the `09-Assistant/` folder next to this file.

6. Permission Summary (Module Level)

Permission Key	Description	Administrator	Manager	Employee	Custom Role
`assistant.chat`	Chat with the assistant: open TFA, ask questions, choose a model, start new conversations	Granted	Granted	Granted	Configurable
`assistant.actions.confirm`	Confirm assistant actions: confirm, edit or cancel actions TFA prepares	Granted	Granted	Granted	Configurable
`roles.manage` *(Settings module key, checked by TFA for role changes)*	Prepare and confirm a role change through TFA	Granted	Denied	Denied	Configurable

Both TFA keys are also given to every role that existed when they were first added. All other TFA features (password help, administrator help, how-to help, task lists) need only `assistant.chat`.

7. Related Modules

- **Settings (TFA Settings)** – an administrator configures the AI providers (Ollama, Google Gemini, OpenAI GPT), models and API keys TFA can use. Role Configuration grants `assistant.chat` and `assistant.actions.confirm`.
- **Monitoring (Task Management)** – TFA reads the user's tasks through the same task rules and links to task pages.
- **Communication (Mail)** – mails prepared by TFA are sent as normal TaskFlow internal mail; "find user" uses the mail contact list.
- **Profile** – TFA's profile change uses the My Profile rules; password questions are sent to **My Profile → Change password**.
- **Management (Employee Management)** – TFA's role change uses the employee update; "my manager" uses department managers.
- **Settings (Application Settings)** – the application name and time zone are used in TFA's answers and in deciding what is due today.
- **Legal** – the Privacy and Terms pages describe how assistant conversations and voice input are handled.

8. Expected Outcome

Every permitted user can open TFA from any screen, ask how TaskFlow works and get an answer from the official help, see their upcoming and overdue work in a clear priority order, and have routine mails and profile updates prepared for one-click confirmation. Administrators can also change a user's role from the chat. No action ever happens without the user's confirmation, TFA never does more than the user is allowed to do, passwords and keys never pass through the chat, and every action outcome is kept in the audit log.
