Monitoring Module – Functional Workflow

> **Project:** TaskFlow – Intelligent Task Allocation & Tracking System **Module:** Monitoring (TaskFlow Monitoring) · **Child Modules:** Task Management, Comments & Activity History, Kanban Board, Employee Workload **Version:** 1.0 · **Last Updated:** 31-Oct-2026 **Author:** Jojo George (jojogeorge3344@gmail.com) © 2026 Jojo George. All rights reserved.

1. Module Overview

Monitoring is where TaskFlow's tasks are kept. Users list, create, open, edit, move, reassign and delete tasks. They talk about a task in its discussion and can see everything that happened to it in its activity history. The Kanban board shows the same tasks as status columns, and the Employee Workload screen shows how much work each employee has.

2. Purpose / Business Value

- Gives every task one owner, one deadline and one status, and every change is recorded with who made it and when.
- Each person sees only the tasks they are allowed to see: Employees see their own tasks, Managers see their team's tasks, Administrators see all tasks.
- Managers can spot overdue and unbalanced work (board highlights, workload counts, the "High load" badge) and move tasks to someone else, giving a reason that is recorded.
- People are told about changes as they happen. Assignment, reassignment, comments and worked-hours changes send in-app notifications, and most of them also send internal mail.
- Worked hours are tracked against the estimate, so managers can see how much effort a task has left.

3. Who Can Access This Module

Role	Can See Module	Can Use Module	Access Level (Own / Team / Organization)
Administrator	✅	✅	Organization (holds `tasks.view.all` and the organization dashboard, so sees every task)
Manager	✅	✅	Team (holds `tasks.view.all`, but because the role has the team dashboard and not the organization dashboard, the system limits it to the team's tasks plus the tasks the manager created, is assigned or is notified about)
Employee	✅	✅	Own (tasks they are assigned, created or are notified about)
Custom Role	Configurable	Configurable	As granted (Own by default; Organization or Team when `tasks.view.all` is granted)

Users with `tasks.view.all` see the menu **TaskFlow Monitoring → Task Management / Employee Workload / Board**. Everyone else sees **Task Management → My Tasks / Board**. Employee Workload is shown only to users with `workload.view`, and Board only to users with `board.view`.

4. Screens in This Module

#	Screen Name	Menu Path	Purpose	Visible To
1	Task List ("Task Management" / "My Tasks")	TaskFlow Monitoring → Task Management, or Task Management → My Tasks (`/tasks`)	Search, filter and page through accessible tasks	All signed-in users
2	Create Task	Task List → **Create task** (`/tasks/new`)	Create and assign a new task, or a copy of an existing one	`tasks.create` (Administrator, Manager)
3	Task Details	Task List / Board → click a task (`/tasks/{id}`)	Full task information, edit, status, hours, tabs	Users who can access the task
4	Reassign Task	Task Details → **Reassign task** tab → **Choose new assignee** (`/tasks/{id}/reassign`)	Move the task to another person with a reason	`tasks.reassign` (Administrator, Manager)
5	Task Discussion	Task Details → **Open full discussion** → (`/tasks/{id}/discussion`)	Read, post, edit and delete comments	Users who can access the task
6	Activity History	Task Details → **Open full history** → (`/tasks/{id}/activity`)	Read the full, filtered change history	`tasks.activity.view`
7	Board (Kanban)	TaskFlow Monitoring → Board, or Task Management → Board (`/board`)	See tasks as status columns and drag them to change status	`board.view`
8	Employee Workload	TaskFlow Monitoring → Employee Workload (`/workload`)	See each employee's task counts and allocation	`workload.view` (Administrator, Manager)

5. Child Modules

#	Child Module	Purpose	Visible To	Document
04.1	Task Management	List, create, copy, view, edit, log hours on, change status of, reassign and delete tasks (Screens 1–4)	All signed-in users (actions by permission)	`04.1-Task-Management.md`
04.2	Comments & Activity History	Discuss a task and read its change history; Administrator worked-hours corrections (Screens 5–6)	Users who can access the task; history needs `tasks.activity.view`	`04.2-Comments-and-Activity-History.md`
04.3	Kanban Board	See accessible tasks as status columns and drag cards to change status (Screen 7)	`board.view` (all system roles by default)	`04.3-Kanban-Board.md`
04.4	Employee Workload	See each employee's task counts and allocation to balance work (Screen 8)	`workload.view` (Administrator, Manager)	`04.4-Employee-Workload.md`

The child documents are in the folder `04-Monitoring/`. Each one holds that child's screens, functionalities, step-by-step workflows, business rules and messages.

6. Permission Summary (Module Level)

Permission Key	Description	Administrator	Manager	Employee	Custom Role
`tasks.view.own`	View my tasks (assigned, created, notified)	Always On	Always On	Always On	Always On
`tasks.view.all`	View all tasks (Managers are limited to their team)	Granted	Granted	Denied	Configurable
`tasks.create`	Create and copy tasks	Granted	Granted	Denied	Configurable
`tasks.update`	Edit tasks (and log hours on any accessible task)	Granted	Granted	Denied	Configurable
`tasks.delete`	Delete tasks	Granted	Denied	Denied	Configurable
`tasks.reassign`	Reassign tasks	Granted	Granted	Denied	Configurable
`tasks.recipients.manage`	Manage task recipients	Granted	Granted	Denied	Configurable
`tasks.status.change`	Update task status (board and details)	Granted	Granted	Granted	Configurable
`tasks.comment.create`	Post task comments	Granted	Granted	Granted	Configurable
`tasks.comment.edit`	Edit own task comments	Granted	Granted	Granted	Configurable
`tasks.comment.delete`	Delete own task comments	Granted	Granted	Granted	Configurable
`tasks.activity.view`	View task history	Granted	Granted	Granted	Configurable
`board.view`	View board	Granted	Granted	Granted	Configurable
`board.filters.use`	Use board filters (requires `board.view`)	Granted	Granted	Granted	Configurable
`workload.view`	View workload	Granted	Granted	Denied	Configurable
`workload.filters.use`	Use workload filters (requires `workload.view`)	Granted	Granted	Denied	Configurable
`workload.tasks.open`	Open an employee's tasks from workload (requires `workload.view`)	Granted	Granted	Denied	Configurable

Correcting or deleting worked-hours history entries has no permission key. It is limited to the Administrator role.

Which child uses which key: 04.1 uses the `tasks.view.*`, `tasks.create`, `tasks.update`, `tasks.delete`, `tasks.reassign`, `tasks.recipients.manage` and `tasks.status.change` keys; 04.2 uses `tasks.comment.*` and `tasks.activity.view`; 04.3 uses `board.*` and `tasks.status.change`; 04.4 uses `workload.*`.

7. Related Modules

- **Dashboard** – Dashboard chart segments open the Task List as a drill-down. The Manager or Administrator dashboard keys also decide whether a role with `tasks.view.all` is limited to its team.
- **Management** – Projects (required on every task), employees (assignee, recipients) and departments or project-manager flags (which define a Manager's team) come from Management.
- **Communication** – Assignment, reassignment, comments and worked-hours changes create in-app notifications and internal mail. Deadline reminders use each task's reminder fields.
- **Settings** – Reminder Settings give the default reminder intervals. Application Settings give the default priority, the time zone used for "Due today" and "Overdue", and the switches for in-app notifications and mail. Role Configuration grants the Monitoring keys.
- **Reports** – Reports use the same task data. Managers move between Workload and Reports for planning.
- **TaskFlow Assistant (TFA)** – The assistant reads the user's tasks (for example "get my tasks" and "prioritise tasks") through the same task scope.

8. Expected Outcome

Every user sees exactly the tasks they are allowed to see. Managers and Administrators create, edit, reassign and (Administrators) delete tasks, and everyone moves their tasks through the allowed statuses on the details screen or the board. The people on a task discuss it in one place and are told about each change, and the activity history shows what changed, who changed it and when. Managers can see workload imbalances and overdue work and move tasks to balance it.
