Management Module – Functional Workflow

Project: TaskFlow – Intelligent Task Allocation & Tracking System
Module: Management · **Child Modules:** Employee Management, Department Management, Project Management (incl. Positions)
Version: 1.0 · **Last Updated:** 31-Oct-2026

1. Module Overview

The Management module (menu **TaskFlow Management**) is where the organization's master data is kept: the people who use TaskFlow (employees and their roles), the departments they belong to, and the projects they work on together with the position and percentage of time each person gives to a project. Tasks, dashboards, workload, reports and the TaskFlow Assistant all rely on this data.

2. Purpose / Business Value

- Gives administrators one place to create sign-in accounts, give roles, switch accounts on or off and remove people who have left.
- Groups people into departments and projects. A person's managers come from these groups, so no one has to keep a separate "reports to" list.
- Stops people being over-booked: one person can be given at most 100% across all projects, and every project needs a manager.
- Protects the system. The last active Administrator cannot be removed, nobody can delete their own account, and anyone whose access changes is signed out straight away.

3. Who Can Access This Module

Role	Can See Module	Can Use Module	Access Level (Own / Team / Organization)
Administrator	✅	✅	Organization
Manager	✅ (Project Management only)	View only (projects, project details)	Organization (no team limit on the lists)
Employee	❌	❌	–
Custom Role	Configurable	Configurable	As granted (Organization)

> Managers hold `employees.view` and `departments.view` by default. These let other screens list people and departments, such as the task assignee picker. They do **not** show the Employee Management or Department Management menu. Those menus need at least one action permission (create, edit, delete, and so on).

4. Screens in This Module

#	Screen Name	Menu Path	Purpose	Visible To
1	Employee Management	TaskFlow Management → Employee Management (`/employees`)	List, search, filter, add, edit, activate/deactivate and delete employees, and reset their MFA	Administrator; custom roles holding any employee action permission
2	Department Management	TaskFlow Management → Department Management (`/departments`)	Add, edit and delete departments and choose their managers and employees	Administrator; custom roles holding any department action permission
3	Project Management	TaskFlow Management → Project Management (`/projects`)	List projects, add, edit and delete them, and manage each project's team	Administrator, Manager (read only); custom roles with `projects.view`
4	Project Details	Project Management → click a project name (`/projects/{id}`)	See the project's team, summary figures and tasks, with filters	Administrator, Manager; custom roles with `projects.view`

5. Child Modules

#	Child Module	Purpose	Visible To	Document
03.1	Employee Management	Sign-in accounts, roles, status, deletion and MFA reset for every person	Administrator; custom roles holding any employee action permission	`03.1-Employee-Management.md`
03.2	Department Management	Departments and their managers and employees	Administrator; custom roles holding any department action permission	`03.2-Department-Management.md`
03.3	Project Management (incl. Positions)	Projects, project teams with position and allocation %, project managers, project details and positions	Administrator, Manager (read only); custom roles with `projects.view`	`03.3-Project-Management.md`

The child documents are in the folder `03-Management/`. Each one holds the screens, functionalities, step-by-step workflows, business rules, messages and permission keys of that child.

6. Permission Summary (Module Level)

The module has 18 permission keys of its own, and Employee Management also uses the Settings key `roles.administrator.assign`. The full table with role columns is in each child document.

Child Module	Permission Keys	Administrator	Manager	Employee	Custom Role
03.1 Employee Management	`employees.view`	Granted	Granted	Denied	Configurable

© 2026 Jojo George. All rights reserved. · jojogeorge3344@gmail.com

Child Module	Permission Keys	Administrator	Manager	Employee	Custom Role
03.1 Employee Management	`employees.create`, `employees.edit`, `employees.status.change`, `employees.role.assign`, `employees.mfa.reset`, `employees.delete`	Granted	Denied	Denied	Configurable
03.1 Employee Management	`roles.administrator.assign` (Settings key, used here)	Granted	Denied	Denied	Denied (not assignable)
03.2 Department Management	`departments.view`	Granted	Granted	Denied	Configurable
03.2 Department Management	`departments.create`, `departments.edit`, `departments.delete`, `departments.members.manage`	Granted	Denied	Denied	Configurable
03.3 Project Management	`projects.view`	Granted	Granted	Denied	Configurable
03.3 Project Management	`projects.create`, `projects.edit`, `projects.delete`, `projects.members.manage`, `positions.create`	Granted	Denied	Denied	Configurable

Every key except `employees.view`, `projects.view` and `departments.view` also needs the view key of its screen. Older roles may still hold `employees.manage`, `projects.manage` or `departments.manage`. These act like the finer keys they were split into.

Some screens quietly need keys of a sibling child: the Employee Management screen loads projects and departments (`projects.view`, `departments.view`), and the department members dialog and project team picker load people (`employees.view`).

7. Related Modules

- **Authentication** – accounts created here are the sign-in accounts. Deactivating, deleting, or changing a username or role ends sessions, and the MFA reset is part of MFA set-up.
- **Monitoring (Tasks, Board, Workload)** – task assignees and recipients come from the employee list, every task belongs to a project, and workload uses project allocations. An employee with unfinished tasks cannot be deleted.
- **Dashboard** – a manager's team (departments they manage plus projects they are flagged on) decides what the manager dashboard shows. The organization dashboard counts employees, departments and projects.
- **Settings → Role Configuration** – the roles offered in the employee form, and the permission keys listed here, are managed there.
- **Communication** – the MFA reset sends the employee a system notification.
- **Reports** – reports filter by project and keep showing deleted people's history.
- **TaskFlow Assistant (TFA)** – the assistant can prepare a role change ("propose_role_change") that an administrator confirms. It then uses the same employee update.

© 2026 Jojo George. All rights reserved. · jojogeorge3344@gmail.com

- **Profile** – people change their own password and contact details there, not in Employee Management.

8. Expected Outcome

Administrators keep an accurate list of employees, departments and projects. Every person has the right role, belongs to the right departments, and is allocated to projects without passing 100%. Each project has a manager. Accounts can be switched off or removed safely without losing history, and access changes take effect at once. Managers can see the projects and teams they need when they plan and assign work.
