Help Knowledge – Functional Workflow

Project: TaskFlow – Intelligent Task Allocation & Tracking System
Parent Module: TaskFlow Assistant (TFA) · **Child Module:** 09.3 Help Knowledge
Version: 1.0 · **Last Updated:** 31-Oct-2026
Author: Jojo George (jojogeorge3344@gmail.com)

1. Overview

Help Knowledge is TFA's built-in user guide. When a user asks "how do I...?" in the TFA Panel, TFA answers only from 19 written help topics that ship with TaskFlow, and adds a link to the matching screen. Topics that the user's role cannot use only say who can do it.

2. Purpose / Business Value

- Gives every user instant, consistent how-to answers without training material or a colleague.
- Prevents made-up answers: TFA never invents screens or features; if no topic matches, it says it does not have that information.
- Avoids confusing users with steps they cannot perform: role-restricted topics only explain who can do it.

3. Who Can Access

Role	Can See	Can Use	Access Level (Own / Team / Organization)
Administrator	✅	✅	Own; all topics with full steps
Manager	✅	✅	Own; Administrator-only topics show "who can do it" only
Employee	✅	✅	Own; Administrator-only and Manager/Administrator topics show "who can do it" only
Custom Role	Configurable	Configurable	As granted (`assistant.chat`); role-restricted topics show "who can do it" only, because topics are matched by role name

Notes (from the topic files' `roles:` lines):

- Administrator only: Application settings, Change a user's role, Project management, Employee management, TFA settings and AI models.
- Manager and Administrator: Create a task, Reassign a task, Deadline reminder settings, Reports and employee workload.
- All roles: the remaining 10 topics.

4. Screens

#	Screen Name	Menu Path	Purpose	Visible To
1	TFA Panel (how-to answers)	Floating **TFA** button (see `09.1-Chat.md`)	Answer "how do I...?" questions with steps and a screen link	Users holding `assistant.chat`

5. Screen & Functionality Details

5.1 Screen: TFA Panel (how-to answers)

Purpose: Answer "how do I...?" questions from TaskFlow's built-in help topics only. **Who can see this screen:** Holders of `assistant.chat`. **Required permission:** `assistant.chat`

Screen Elements

- TFA's written answer in the conversation.
- Link buttons to the matching screen (for example **My Profile**, **Board**, **Mail**).

5.2 Functionalities

#	Functionality	Purpose	Who Can See	Who Can Use	Permission Required	Scope
1	Ask a how-to question	Get steps for a TaskFlow screen or task	Holders of `assistant.chat`	Holders of `assistant.chat`	`assistant.chat`	Own
2	Role-aware help	Topics the user's role cannot use show only who can do it, without steps	Holders of `assistant.chat`	Holders of `assistant.chat`	`assistant.chat`	Own

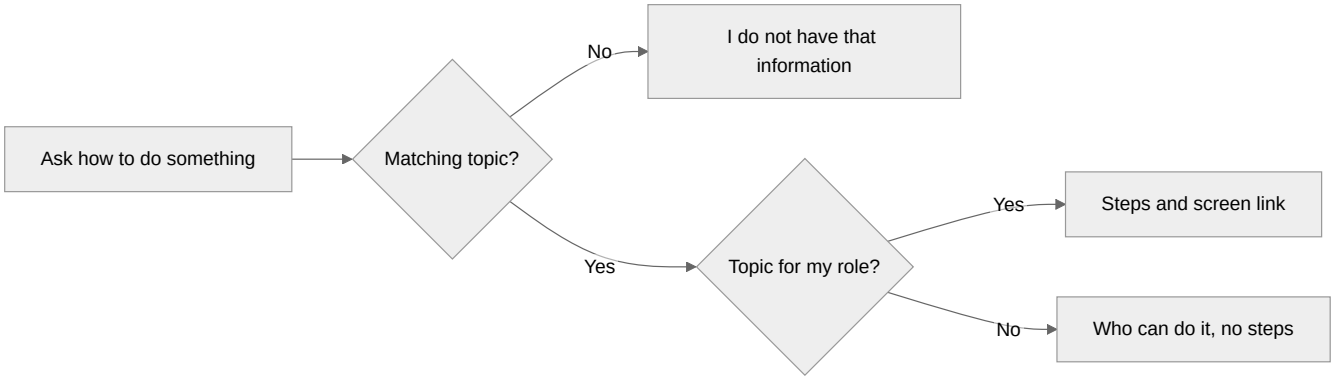

Built-in help topics (19): What TFA can do; Application settings; Use the Board; Change your password; Change a user's role; Change a task's status; Send a mail; Create a task; Project management; Edit your profile; Employee management; Read and organise mail; Notifications; Reassign a task; Deadline reminder settings; Reports and employee workload; Comment on a task and see its history; Find tasks with the task list and filters; TFA settings and AI models.

5.3 Step-by-Step Workflow – Get How-To Help

1. User asks, for example, *"How do I change a task status?"*.
2. TFA searches the help topics by keywords and picks up to 3 best matches.
3. If the topic is for the user's role, TFA answers from its steps and shows a link to the screen.
4. If the topic is not for the user's role (for example "Create a task" for an Employee), TFA only says who can do it, such as *"Tasks are created by Managers and Administrators. If you need a new task, ask your manager to create and assign it to you."*
5. If nothing matches, TFA says it does not have that information. It never invents screens or features.

Flow Diagram

5.4 Business Rules & Validations

- TFA answers how-to questions only from the built-in help topics.
- A topic is matched only when it scores high enough on its keywords and title; at most 3 topics are used.
- Role-restricted topics (Administrator-only, or Manager and Administrator) are matched by the user's **role name**; other roles get the "who can do it" note only.

5.5 Messages Shown to the User

Situation	Message
Restricted topic (default)	{Topic} is not available to your role.
Restricted topic (example)	Application settings are managed by an Administrator. Please contact your system administrator.
No matching topic	TFA tells the user it does not have that information (worded by the AI model).

6. Permission Summary

Permission Key	Description	Administrator	Manager	Employee	Custom Role
`assistant.chat`	Ask TFA how-to questions (help needs no other key)	Granted	Granted	Granted	Configurable

7. Related Modules

- **09.1 Chat** – how-to questions are asked and answered in the chat.
- **09.2 Actions and Tools** – the help search is one of TFA's tools; password help is a separate fixed tool.
- **All documented modules** – each help topic describes a screen of another module (Board, Mail, My Profile, Employee Management, Reports, Settings, TFA Settings, etc.) and links to it.

8. Expected Outcome

Any user holding `assistant.chat` can ask how to do something in TaskFlow and get steps taken only from the official help, with a link to the right screen, or a clear note on who can do it when their role cannot.
