Audit Log and Rate Limits – Functional Workflow

Project: TaskFlow – Intelligent Task Allocation & Tracking System
Parent Module: TaskFlow Assistant (TFA) · **Child Module:** 09.4 Audit Log and Rate Limits
Version: 1.0 · **Last Updated:** 31-Oct-2026
Author: Jojo George (jojogeorge3344@gmail.com)

1. Overview

Audit Log and Rate Limits are TFA's background safeguards. The audit log records what happened to every TFA action (prepared, confirmed, cancelled, expired, refused, failed). The rate limit stops any one user from sending more than 20 messages a minute, so nobody can use up the AI provider's quota. Neither has a screen of its own.

2. Purpose / Business Value

- Accountability: every action TFA prepares or carries out leaves a record of who, what kind, the outcome and when.
- Privacy: the record never contains message bodies, passwords or API keys.
- Fair use and cost control: a per-user limit protects the shared AI provider quota.

3. Who Can Access

Role	Can See	Can Use	Access Level (Own / Team / Organization)
Administrator	❌ (no audit screen)	– (applies automatically)	Limit: own messages; audit: stored for the organization
Manager	❌	– (applies automatically)	Limit: own messages
Employee	❌	– (applies automatically)	Limit: own messages
Custom Role	❌	– (applies automatically)	Limit: own messages

Notes:

- No permission key controls these safeguards; they apply to everyone using TFA.
- Users only see the effect of the limit: the *"You are sending messages too quickly..."* message.

4. Screens

#	Screen Name	Menu Path	Purpose	Visible To
–	(no screen – background safeguards)	–	Record action outcomes; limit messages per minute	Nobody

5. Screen & Functionality Details

5.1 Screen: (no screen – background safeguards)

Purpose: Record what happened to every TFA action and stop any one user from using up the AI provider's quota. **Who can see this screen:** Nobody – there is no screen to view the audit log. **Required permission:** None (always applies to everyone using TFA).

Screen Elements

- None. The user only sees the effect: the *"You are sending messages too quickly..."* message.

5.2 Functionalities

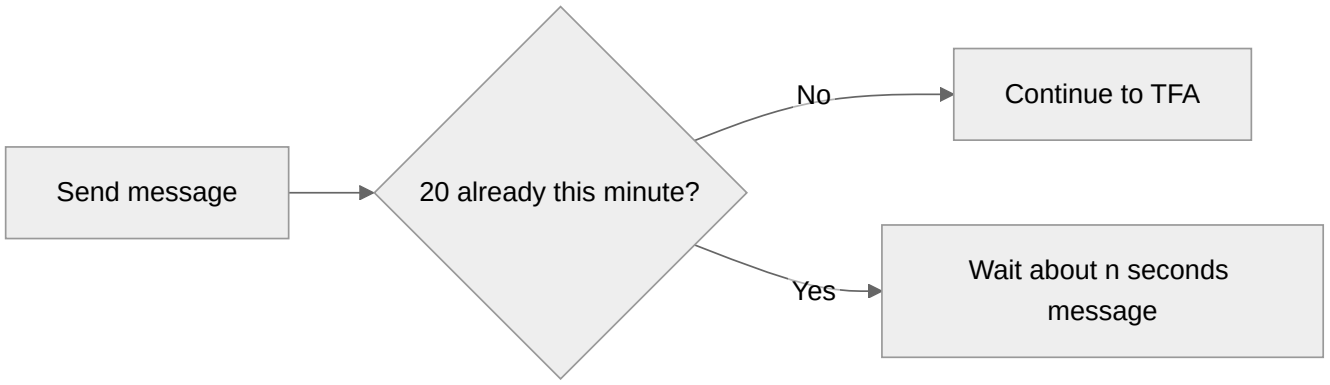

#	Functionality	Purpose	Who Can See	Who Can Use	Permission Required	Scope
1	Action audit log	Records each action outcome: prepared, confirmed, cancelled, expired, refused, failed	Nobody (stored only)	System	–	Organization
2	Per-user message limit	At most 20 messages per user in any one-minute window	All TFA users (message only)	System	–	Own

5.3 Step-by-Step Workflow – Message Limit

1. User sends a message.
2. System counts the user's messages in the last minute.
3. Under 20: the message continues. At 20: the system replies *"You are sending messages too quickly. Please wait about {n} seconds and try again."*

Flow Diagram

5.4 Business Rules & Validations

- The audit log stores the user, the kind of action (Send mail, Update own profile, Change user role), the outcome and the time. It never stores message bodies, passwords or API keys.
- A refusal is logged both when TFA refuses to prepare an action and when a confirm is refused.
- The limit counts only messages that pass the length and safety checks.
- The limit is kept in memory; restarting the server resets it.

5.5 Messages Shown to the User

Situation	Message
Over the limit	You are sending messages too quickly. Please wait about {n} seconds and try again.

6. Permission Summary

Permission Key	Description	Administrator	Manager	Employee	Custom Role
– (none)	Audit logging and the message limit always apply	Always On	Always On	Always On	Always On

7. Related Modules

- **09.1 Chat** – every send passes through the message limit.
- **09.2 Actions and Tools** – every action outcome is written to the audit log.
- **Settings (TFA Settings)** – configures the AI providers whose quota the limit protects.

8. Expected Outcome

Every TFA action outcome is recorded without storing any sensitive content, and no single user can flood TFA with more than 20 messages a minute.
